▶ # MICROVIEW PARKING MANAGER MODULE FOR ARCHIBUS

Are your parking revenues what they should be?

MicroView Parking Manager™ delivers powerful desktop and handheld tools to help your organization efficiently manage your parking operations to ensure maximum revenues.

Manage your parking operations effectively with automated tools built into MicroView Parking Manager™. This new desktop application works with ARCHIBUS® enabling users to issue parking passes, manage lot capacities, and track parking pass history and violations, among other functions. The system issues automatic renewal and pass pick-up e-mails to pass holders.

Save time and money by printing your own parking pass documents. Avoid the high cost of pre-printed forms and parking passes by printing receipts and barcode stickers with your laser or inkjet printer.

Utilize the existing data stored in your ARCHIBUS database or extend the reach of the system to your company HR system. Accurate HR data is used to ensure passes are held by valid employees or individuals.

Don't let cheaters get away with parking in wrong lots, or forging passes. Ensure parking violations are tracked by deploying PDAs in the field to monitor parking lots. Violators can be ticketed on the spot with the optional PDA tools.
